

INTELLIGENT DOCUMENT MANAGEMENT SYSTEM**ABSTRACT OF THE DISCLOSURE**

5 This system and method of the present invention is directed to a
process of creating and using a medical database whereby the contents
have been validated through a peer review process to produce an extensive
searchable base of protocols and links to literature references by a given
medical topic. The database is populated and indexed with protocols for
both diagnosis and treatments. The protocols are created and reviewed
10 with research evidence, which provides for establishing confidence levels.
It is then subsequently categorized and indexed into a database system.
This information can then be subsequently accessed by keywords by
practitioners from the patient point of care location.
